EDUCATION

New York University (NYU), New York, NY, USA

B.A. in Mathematics and Computer Science | Expected June 2027

- GPA: 3.75 / 4.00
- Relevant Coursework: Data Structures & Algorithms, Computer Systems Organization, Software Engineering, Web Design, Machine Learning, Linear Algebra, Probability, Statistics, Discrete Mathematics

TECHNICAL SKILLS

Programming Languages: Python, Java, JavaScript (ES6+), TypeScript, SQL, HTML/CSS

Frameworks & Technologies: React, Vue, Next.js, Astro, FastAPI, Flask, Node.js, RESTful APIs, MongoDB, SQLite

Cloud & DevOps: Cloudflare Workers, DigitalOcean, Docker, GitHub Actions, CI/CD, Linux

Computer Science Fundamentals: Data Structures & Algorithms, Software Engineering, Computer Systems, Web Development, Machine Learning

WORK EXPERIENCE

KYG Machinery Ltd.

Guangzhou, China

Website Development Intern

May 2025 – Aug 2025

- Developed and maintained the company website using Astro and Cloudflare Workers, supporting multilingual product pages and online product showcases.
- Built internal CMS and administrative tools for product drafting, publishing, categorization, bulk import, and image asset management.
- Designed backend workflows using Cloudflare D1 and R2 for product data management, image storage, customer inquiries, and quotation processing.
- Implemented authentication and security features including user login, email verification, password reset, CSRF protection, and audit logging.
- Participated in ERP-related backend module development, including quotation, pricing, order management, and inventory management systems.

PROJECT EXPERIENCE

NearBite – Personalized Restaurant Recommendation Platform

New York, NY

Frontend, Database & Recommendation System Developer

Jan 2026 – May 2026

- Built a personalized restaurant discovery platform featuring natural language search, structured filtering, map exploration, user profiles, favorites, and recommendations.
- Developed semantic restaurant search using Sentence Transformers embeddings and a custom cosine similarity implementation.
- Designed a machine learning ranking system combining semantic relevance, survey preferences, interaction history, cuisine preferences, and ratings.
- Deployed the application using Streamlit, MongoDB Atlas, and DigitalOcean.

CatCh – Gamified Programming Learning Platform

New York, NY

Full-Stack Developer

Apr 2026 – May 2026

- Developed a full-stack gamified coding education platform integrating coding challenges, automated grading, rewards, marketplace trading, and leaderboards.
- Architected modular services using React, Vite, FastAPI, MongoDB, and Docker Compose.
- Built secure authentication with verification codes, JWTs, and role-based permissions.
- Implemented secure code execution pipelines with isolation, resource limits, pytest validation, and GitHub Actions CI.
